- Thin wall chrome moly axle
- Pedal grips
- Easy start wheel studs
- 22" steering shaft
- Slack top gun steering wheel
- Loop back bumper
- Adjustable lead axle cassette

The SP-9 is the next generation kart from Slack Performance. Designed to be free from the entrance to the exit of corner and with a lower center of gravity. The SP-9 will be the right choice for hard dirt tracks to asphalt and indoor tracks.

All Slack Performance karts incorporate a rod end with an "L" bracket for caster/camber adjustments. The aluminum "L" bracket is black anodized with indicator lines for easy adjustment. The bottom features a spherical bearing to eliminate kingpin bind. The spindle shafts are hardened for improved strength for keeping your camber setting from wandering. All spindles and hubs have crush spacers to allow you to tighten them up without crushing the bearing. This allows you to get the front end tight without any unwanted play.

The SP-7 is considered to be our "Saturday Night Special." This kart is excellent on small dirt tracks and for Jr. drivers, where good weight transfer is important. The SP-7 continues to be a proven winner and remains virtually unchanged since 2001.

Standard on all karts is the adjustable left rear cassette. This billet aluminum piece is black anodized and will let you fine-tune the kart while on the scales. It will also let you make that quick last minute adjustment when things are a little rushed.
